Homework 3 Data Processing

Design process

- Transform data from csv to json
- Identify temperature from json file
- Graph will display horizontal bars -> write a code that equates width of bar to temperature, height of bar should be constant
- Set axes to fit first and last values of bars
- Scale axis properly using
- Fit vertical axis using viewport so legend can be seen
- Set up hovering tool to display temperature
- Extra: Change colors of bars according to temperature
- Write name axis
